DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-16 rejected under 35 U.S.C. 102(e) as being antipated by Guanter et al., (US 2003/0179778).

As per claims 1-16, Guanter teaches an apparatus for managing an address book in a portable wireless terminal, the apparatus comprising:
a radio frequency identification (RFID) recognition section for receiving information transmitted from an RFID chip after transmission of an electric wave, storing and reading received information, and converting read information into data suitable for an

address book; a display section for displaying data for management of the address book; a user command input section for inputting a command for e address book management by a user; an address book storage section for storing information; and a control section for controlling an operation of the RFID recognition section, so as to transmit the converted data to the address book storage section according to a user command, thereby storing the data. (Guanter, pgs. 1-9)

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-16 are rejected under 35 U.S.C. 102(e) as being anticipated by Clarke et al., (US6,912,407).

As per claims 1-16, Clarke teaches an apparatus for managing an address book in a portable wireless terminal, the apparatus comprising:
a radio frequency identification (RFID) recognition section for receiving information transmitted from an RFID chip after transmission of an electric wave, storing and reading received information, and converting read information into data suitable for an address book; a display section for displaying data for management of the address book; a user command input section for inputting a command for e address book management by a user; an address book storage section for storing information; and a control section for controlling an operation of the RFID recognition section, so as to transmit the converted data to the address book storage section according to a user command, thereby storing the data. (Abstract, cols. 3-8)
